Project Design Phase
Proposed Solution Template

Date	24 September 2026
Team ID	24bcs020@mscartsandscience-edu.in
Project Name	AI Fittrack
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Individuals pursuing fitness at home often lack real-time expert guidance, leading to improper exercise posture, increased risk of injury, inefficient workouts, and difficulty in manually tracking repetition counts and exercise consistency.
2.	Idea / Solution description	**AI Fittrack** is an AI-powered smartphone application that uses computer vision and real-time pose estimation to monitor exercise posture through the device camera. It provides immediate audio-visual feedback for form correction and automatically counts workout repetitions accurately without requiring physical wearables.
3.	Novelty / Uniqueness	Unlike static workout videos or manual logging apps, AI Fittrack offers dynamic computer vision pose-estimation processing directly on-device. It delivers real-time voice cues for biomechanical corrections, rep counting, and personalized workout analytics without expensive hardware or personal trainers.
4.	Social Impact / Customer Satisfaction	Democratizes access to high-quality fitness coaching for individuals who cannot afford personal trainers. It prevents physical injuries caused by poor form, boosts user confidence, and promotes long-term healthy habits through accessible technology.
5.	Business Model (Revenue Model)	Freemium model offering basic exercise tracking for free, with a monthly/annual subscription ("AI Fittrack Pro") for advanced pose-correction metrics, customized AI workout plans, and comprehensive health telemetry analysis.
6.	Scalability of the Solution	Highly scalable software solution leveraging standard smartphone cameras and cloud backend infrastructure. The system can easily add new exercise models, expand to physical therapy/rehabilitation markets, and scale globally with zero hardware distribution overhead.
